Abstract (Basic): EP 316215 A

The machine comprises a printer driven by a computer to print onto a strip of paper or cardboard information concerning the article to be labelled. The strip is delivered from a reel and the information printed onto successive lengths of the strip to form individual labels. A cutter at the delivery outlet of the printer separates the individual labels from the strip. The labels are then gripped and transported on a label carrier to a device which attaches the label to the article to be labelled.

USE/ADVANTAGE - Automatic preparation and placing of price labels on soles of boots or shoes.
